EDUCATION

ANNA UNIVERSITY (BIT CAMPUS)

BE Electronics and Communication Engineering

June 2024

CGPA: 8.26/10.0

MILTON MATRICULATION HIGHER SECONDARY SCHOOL

Class – XII, State Board

May 2020

Percentage: 71.16

SKILLS

Languages: Java, JavaScript, Servlet, HTML/CSS, SQL, Perl

Tools: Git, GitHub, VS Code, IntelliJ IDEA, Postman, Bitbucket, Jira

Frameworks: Spring, Spring Boot, Spring MVC, Hibernate

Certifications & Training:

- Programming in Java (NPTEL) – Scored 84%
- Learn Web Development with HTML, CSS, JavaScript – Coursera
- Junior Grade Typewriting English – First Class with Distinction

PROJECTS

Implementation of Elliptic-Curve Diffie-Hellman algorithm for secured communication

May 2024

Technology Stack: Java, MySQL, Apache Server, JDBC

- Developed a secure communication system for encrypted data transfer between patients and doctors, ensuring privacy and confidentiality.
- Implemented Elliptic-Curve Diffie-Hellman (ECDH) for key exchange and AES encryption for securing medical data.
- Used Java with JDBC for backend logic, MySQL for database operations, and hosted the system on an Apache server.
- Supported secure messaging, electronic health records, and medical image transfer, with enhanced image quality during decryption.
- Project published in the *International Journal of Novel Research and Development (IJNRD)*, May 2024. [Link]

EXPERIENCE

Neurealm (formerly GS Lab — GAVS) | Software Engineer

Mar 2025 – Present

Project: Athenahealth – Rules 2.0 Migration

Chennai, TN

- Modernized a legacy Perl application by migrating its functionality to Java, utilizing the Core Java Collection Framework (`List`, `Map`, `Set`) and Stream API to improve performance and long-term maintainability.
- Implemented efficient and declarative data processing logic in Java using Streams for functional operations, including filtering, mapping, and flatMapping.
- Proactively ensured high code quality and minimized potential defects by designing and implementing a comprehensive unit testing strategy that achieved over 95% test coverage for the migrated codebase.
- Managed Bitbucket (Git) pull requests for efficient code reviews and oversaw branch merging, ensuring seamless team collaboration and conflict-free code integration within the development lifecycle.
- Conducted rigorous post-migration testing to verify accuracy and system reliability.
- Performed root cause analysis of defects, providing actionable insights for faster issue resolution and improved software quality.
- Collaborated with teams on requirements analysis to ensure a smooth migration and created detailed development and testing documentation to maintain clarity and consistency.
